# Managing the Resident Claim Profile

- 1 Normalise your AN-ACC Classes/Case mix**  
 Undertake an internal AN-ACC review of all residents to understand typical claim profile for your sites and where each resident would align today.
- 2 Align your rostering demand templates to your target star rating & occupancy**  
 Track reclassifications, planned resident movements (admissions/discharges), occupancy levels per day and across all facilities.
- 3 Control and understand your data**  
 Continually monitor residents' changing care needs and accurately estimate future potential classifications. Track reclassifications, planned resident movements (admissions/discharges), occupancy levels per day and forecasted outcomes across all in situ consumers.
- 4 Strategically request your classifications**  
 Manage the resident claim profile (Case mix distribution) to offset resident movements and maintain a case mix that aligns to the workforce strategy.
